A marking gauge is a hand tool used in wood and metalworking to scribe a line parallel to a reference edge. It consists of a sliding head (or fence) riding on a long beam, with a pin, wheel, or knife at the end to mark the wood.

Relief carving is a sculpture technique where figures or designs are sculpted onto a flat background surface. The design stays attached to the solid backing, but parts of the surrounding material are removed to make the main shapes pop out in three dimensions.

Carpentry focuses on building and repairing large-scale structures like houses, frames, and roofs. Woodworking focuses on crafting smaller, detailed, and artistic items like furniture, cabinets, and decorative pieces. Carpenters prioritize structural strength on job sites, while woodworkers prioritize fine details in a shop.

Woodworking is the activity, art, or occupation of cutting, shaping, and joining wood to make useful or decorative objects

A specialized chisel set for working on inset locks.

Join us at the York Town Craft Guild!
The fourth Thursday of the month.
(Jan-Oct). 639 North Franklin Street,
York PA 17403. All are welcome.
